MANUAL HANDLING

HT Wedge[™] Adjustable Positioning System

HoverApps® HT Wedge™ Adjustable Positioning Device

The HT Wedge™ Adjustable Positioning Device inflates to lift and position the head and chest of a supine patient for convenient, efficient positioning in any patient care department. The dual chamber design allows the patient's head and chest to be adjusted separately, making it easier to achieve ear to sternal notch positioning regardless of the patient's body type.

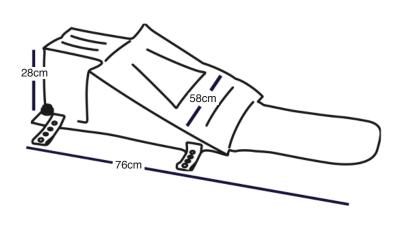

Features:

- Two chamber design provides maximum adjustability of head, neck and chest
- Low profile when deflated allows products to be left underneath the patient in between uses
- Inflation/deflation valves located on either side of the head chamber offer easy access for inflation and adjustment of the head and chest chambers
- Heat-sealed construction and a microbial-controlling nylon fabric facilitate easy cleaning and minimize infection control risk
- MHHT-AIR2300 Air Supply delivers variable speed inflation for optimal patient positioning and efficiency, inflating in seven seconds and deflating in fifteen seconds
- Weight limit of 363kgs accommodates most patients
- Variable speed Air Supply allows caregiver to control inflation for patient safety and comfort
