

FIRE & EVACUATION

AlbacMat Rescue Mat

The Innovative Evacuation Necessity!

AlbacMat Rescue Mat

The AlbacMat provides an affordable evacuation tool for hospitals and nursing homes where patients may be incapacitated or unable to vacate the facility quickly. The light sturdy construction of the AlbacMat means that each patient can be removed with ease by a single staff member, reducing evacuation times.

Features:

- Can be put quickly to use to remove patients from a dangerous situation
- Minimises the effort required by rescuers to evacuate patients
- Made from customised polypropylene board and a light canvas material, enabling the AlbacMat to 'glide' over surfaces (including carpet)
- Reduces the number of rescuers needed to rescue a patient, potentially halving the time taken to evacuate a facility
- Polypropylene board acts as an insulator to the patient, absorbing the concussion of travel
- Heat resistant to 85 degrees Celsius—making it safe to use in extreme heat
- Optional AlbacMat Holder can hold up to four AlbacMats for storage or quick deployment. The holder has a handle to conveniently hang on a wall hook

AlbacMat Rescue Mat
