

Bariatric Bari-Lift & Transfer

Bari-Lift & Transfer

The Bari-Lift and Transfer™ assists and enhances patient mobilisation while reducing workers' compensation claims associated with patient handling.

This transfer system is the most versatile lift system available, designed to help patients out of bed and into a wheelchair or shower/commode chair. The Bari-Lift and Transfer system allows lifting from the floor level and creates a safer environment to properly transfer the patient while protecting care providers from injury.

Available options include built-in scales and multiple sling types to choose from, including commode slings.

Weight capacity is 455kgs.

FUNCTIONAL

The ergonomic alternative to manual lifting.

COMFORT

Durable multi-sized slings have varied recline positioning for patient security, with or without commode option.

CARE

Safely lift & transfer patients, even from the floor position. Scale available for accurate patient weights.

CONVENIENCE

Fully electric & portable with weight capacity up to 455kg.
